Hunting Bows

Jennings hunting bows have been used by more bowhunters over a longer period of time than any other compound bow in the world! The reason is that, Jennings Hunting Bows provide more power and dependability than any other manufacturer's bow can give you. Jennings gives you maximum performance and this means better arrow penetration and flatter trajectory. Jennings bows can't help you get close to game, but they can give you that feeling of confidence that only comes from shooting the best equipment available in the world today!

Jennings bows have been the choice of the knowledgeable bowhunter for the past ten years; the veteran hunter knows the qualities of a good bow. The Pope and Young Bowhunting Record is proof of this. Out of all possible big game bow and arrow world records, at least four were taken with Jennings Hunting Bows! The current Number One Record Alaska-Yukon Moose, Blacktail Deer, Yellowstone Elk and Black Bear have all been put in the "Book" by Jennings Hunting Bows. The number of "Record Class" animals entered in the "Book" by Jennings bow shooters is overwhelming. For example, during the last hunting season alone Chuck Adams, well known outdoor writer, set a new bowhunting record by being the first archer to take seven record class animals within one year, all with his Jennings!

At Jennings the dependability and performance is "Built-in," so when the shot counts, count on Jennings!

HAROLD BOYACK
POPE & YOUNG WORLD
RECORD BLACK BEAR

Harold Boyack of Salt Lake City, Utah, is one of the top bowhunters in the country with over twenty-three years of archery experience. Harold has hunted across the continent and has taken many trophies from eight big game species. *"After six years and thousands of shots in competition and hunting with my Jennings compound bow, from 23° below in Wyoming to 98° above in Southern Utah without a bow failure, I can describe my Jennings compound bow with absolute trust in its dependability."*

Arrowstar Mark II

The Arrowstar Mark II hunting bow is the most dependable high performance hunting bow available in the world today and is designed to meet the demands of the most discriminating bowhunter. Precise tuning is made simple by adjustability of draw weight, draw length and eccentric wheel balance. Exceptional cable clearance allows the largest feathers to be used.

STANDARD FEATURES

- High strength aluminum alloy Riser—Mamba Black Color
- Adjustable Rest Carriage with Jennings Compound Bow Arrow Rest & Cushion Plunger
- Interchangeable Wood Grained Grip—standard or high wrist
- Drilled and tapped for sight, stabilizer, cushion plunger & bow quiver
- Wide High Performance laminated wood and Magna-Ply Limbs—Black
- Machined Magnesium Eccentric wheels with superior Turcite Bearings
- New wide, large diameter aluminum Idler Wheels with Turcite Bearings
- New flared aluminum Balancing Dorsal Pylons with Dampeners
- Over 10 lb. weight adjustment range & 1 inch draw length adjustment
- Standard Maximum Let-Off eccentrics (approx. 40%) or optional at no cost. Minimum Let-Off eccentrics (approx. 25%)
- Draw Weight Ranges (peak): 35–45 lb.; 40–50 lb.; 45–55 lb.; 50–60 lb.; 55–70 lb.
- Draw Lengths (true): 23″ to 31½″ (can be ordered in ½″ increments)

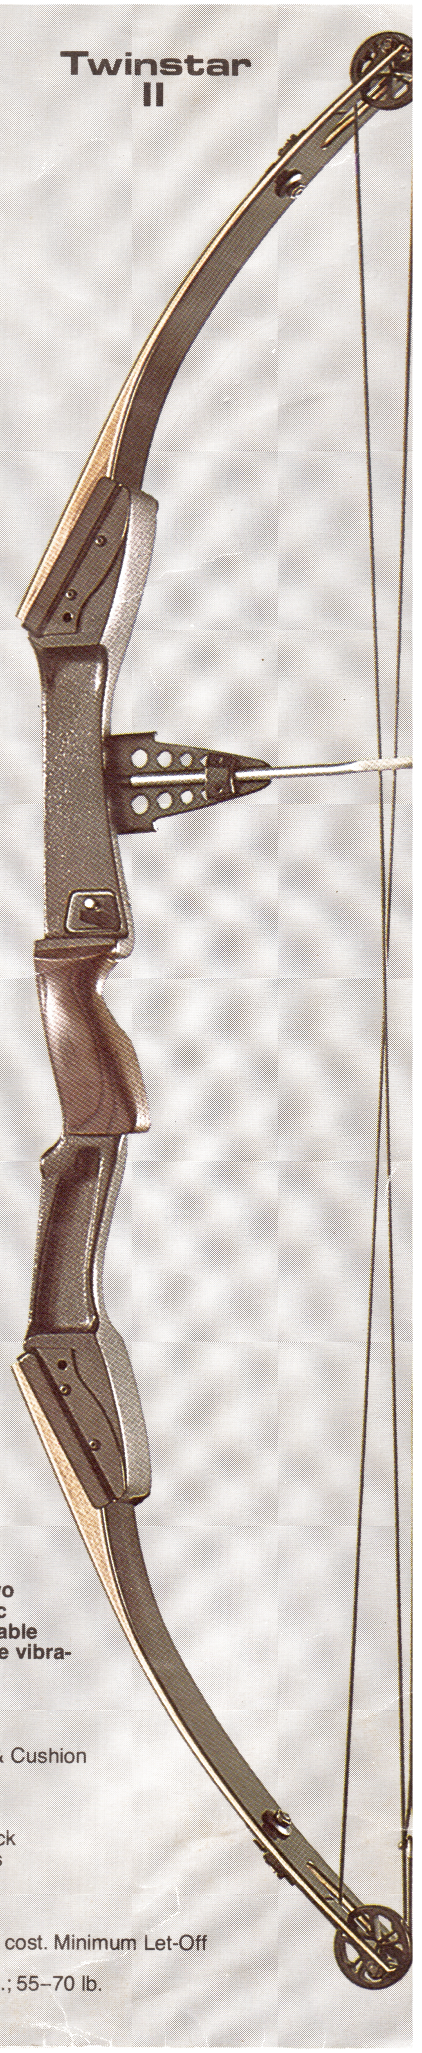
Twinstar II

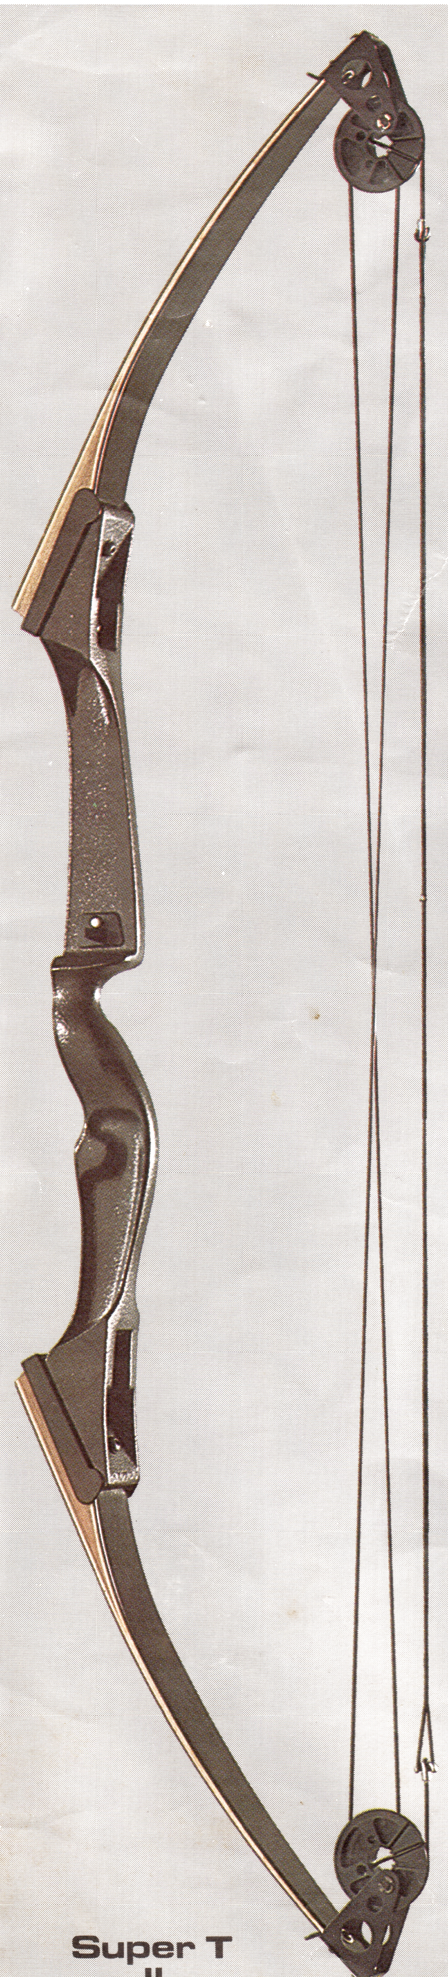
The Twinstar II hunting bow introduces the revolutionary Pylon Cable Guard and Magnesium Eccentric Wheels into the popular two wheel design. In addition to draw weight, draw length and eccentric balancing capabilities, the Twinstar II now gives you the greatest cable clearance possible for large fletching while dampening out all cable vibration noise.

STANDARD FEATURES

- High strength aluminum alloy Riser—Mamba Black Color
- Adjustable Rest Carriage with Jennings Compound Bow Arrow Rest & Cushion Plunger
- Interchangeable Wood Grained Grip—standard or high wrist
- Drilled and tapped for sight, stabilizer, cushion plunger & bow quiver
- Wide, High Performance laminated wood and Magna-Ply Limbs—Black
- Machined Magnesium Eccentric wheels with superior Turcite Bearings
- Eccentric wheel Tuning Units
- Maximum clearance Pylon Cable Guard
- Over 10 lb. weight adjustment range & 1 inch draw length adjustment
- Standard Maximum Let-Off eccentrics (approx. 40%) or optional at no cost. Minimum Let-Off eccentrics (approx. 25%)
- Draw Weight Ranges (peak): 35–45 lb.; 40–50 lb.; 45–55 lb.; 50–60 lb.; 55–70 lb.
- Draw Lengths (true): 23½″ to 31½″ (order in 1″ increments)

Twinstar
II





Super T II

The Super T II is the most popular hunting bow in America. It has total weight adjustability and yet incorporates the reliability and protection of the hanger bracket "closed cable" two wheel system. Dependability, performance and ease of shooting make this bow the choice of bowhunters who want a tough hunting bow that does not require any special maintenance and is always in tune and balance.

STANDARD FEATURES

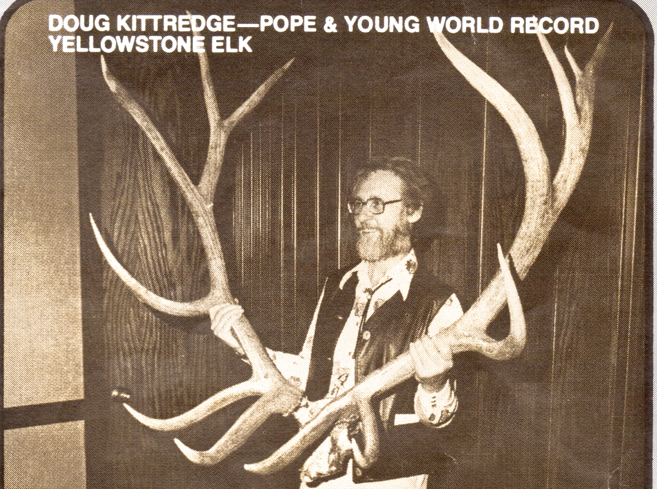
- High strength aluminum alloy Riser—Mamba Black Color
- Jennings Compound Bow Arrow Rest with Center Shot Adjustment Screw
- Drilled and tapped for sight, stabilizer, cushion plunger & bow quiver
- Laminated wood and Magna-Ply Limbs—Black
- Tri-draw Delrin Eccentric Wheels with Light-weight protective Hanger Brackets
- Let-Off approximately 40% to 50%
- Over 10 lb. weight adjustment range
- Draw Weight ranges (peak):
  25–35 lb.; 35–45 lb.; 45–60 lb.; 50–70 lb.
- Draw Length Ranges (true):
  23″–25″ range—(order 24″) 27″–29″ range—(order 28″)
  25″–27″ range—(order 26″) 28″–31″ range—(order 30″)

Sidekick III

The Sidekick III is the toughest, most dependable hunting bow available in the world today. Almost indestructable, this "no maintenance" bow incorporates the technology and many of the advantages usually reserved for more expensive models. Exceptional performance is combined with draw weight adjustability.

STANDARD FEATURES

- High strength aluminum alloy Riser—Autumn Brown Color
- Jennings Compound Bow Arrow Rest with Center Shot Adjustment Screw
- Drilled and tapped for sight, stabilizer, cushion plunger & bow quiver
- Laminated High Performance Magna-Ply Limbs—Black
- Tri Draw Delrin Eccentric Wheels with Light-weight protective Hanger Brackets
- Let-Off approximately 40% to 50%
- Over 10 lb. Weight Adjustment Range
- Draw Weight Ranges (peak) and Draw Length Ranges (true)
  25–35 lb. @ 23″–25″ draw range (order 24″)
  35–45 lb. @ 25″–27″ draw range (order 26″)
  45–60 lb. @ 27″–29″ draw range (order 28″)
  45–60 lb. @ 28″–31″ draw range (order 30″)
  55–70 lb. @ 28″–31″ draw range (order 30″)



DOUG KITTREDGE—POPE & YOUNG WORLD RECORD YELLOWSTONE ELK

World famous bowhunter, Doug Kittredge, started shooting a bow 39 years ago. He has taken numerous trophies from eight species of North American big game, four of which are currently listed in the Pope & Young Record Book. Doug is Bowhunting editor for Bow & Arrow magazine and is a senior member of the Pope & Young Club currently serving as Vice-President of that organization.

"Over the 25 years I've known Tom Jennings, I have never seen bows which perform better than his . . . regardless of make, model or cost. In my eyes, Tom is the leader of bowmakers today. When it comes to my own personal equipment, whether for hunting or field, I wouldn't shoot anything but a Tom Jennings bow!"

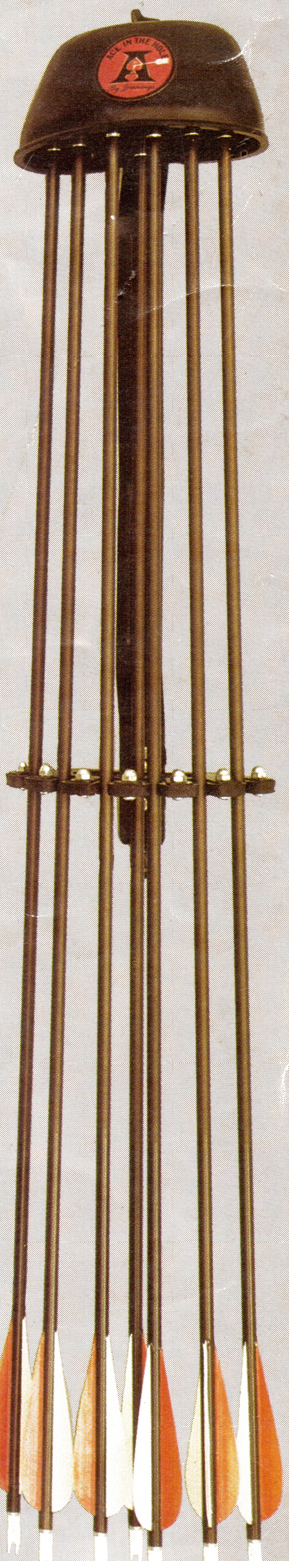
ACCESSORIES

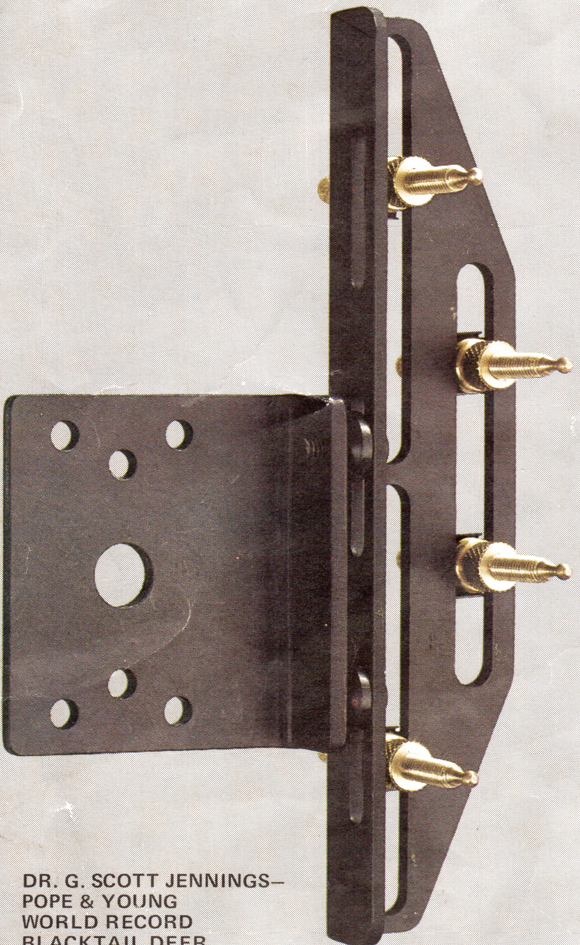
Ace in the Hole Bowquiver

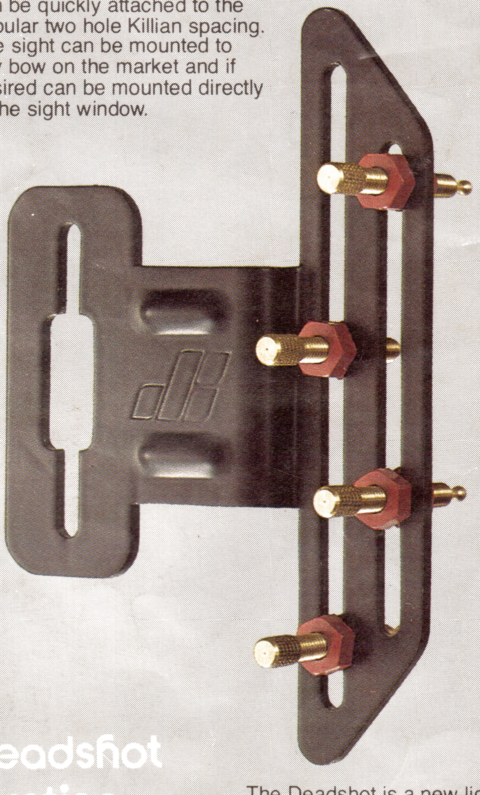
The Ace in the Hole is an innovative eight arrow bowquiver that is designed to attach to your Jennings hunting bow, so your protected "razor sharp" hunting arrows are ready for instant use. The quiver attaches to Jennings bows with a unique "expanding bushing" feature. This attachment makes removing or mounting the quiver fast and simple. A special "High Impact" plastic hood is large enough to cover even the largest broadheads, while protecting their edges and you! The Ace in the Hole bowquiver features adjustable arrow grippers to accommodate large and small arrows. This quiver fits right and left hand bows and can be mounted to bows other than Jennings with quiver attachment brackets that may be bolted or screwed to the riser for positive attachment.



Buckshot Hunting Sight

The improved Buckshot Sight is the strongest and most adjustable hunting sight ever offered to the archery public. Built of light weight aluminum alloy, the Buckshot will take the roughest hunting conditions while providing positive alignment at all times. The sight features a master adjustment, plus independent vertical and horizontal adjustments. The new double pin slots allow you to place your pins very close together to accommodate flat shooting Jennings bows. The Buckshot fits right or left hand bows with front or back mounting and can be quickly attached to the popular two hole Killian spacing. The sight can be mounted to any bow on the market and if desired can be mounted directly to the sight window.





Deadshot Hunting Sight

The Deadshot is a new light weight compact hunting sight. Functional simplicity is the keynote. Strength is derived from a formed single piece aluminum bracket that attaches securely to the riser with machine screws which fit the Killian two hole spacing. Smaller sight pins and a double pin slot give you more flexibility than most bowhunters ever need. The Deadshot fits right or left hand bows and will accommodate front or back mounting.

DR. G. SCOTT JENNINGS—
POPE & YOUNG
WORLD RECORD
BLACKTAIL DEER

Dr. Jennings is an Osteopathic physician in Medford, Oregon and has been an avid bowhunter for the past 29 years. Scott also won first place in the Boone and Crockett Club (1974–76) for his exceptional deer. He is not just a lucky hunter, Scott has three more bucks listed in the Pope & Young Record Book and is a Regular member of the club.

"I have shot a Jennings compound bow since 1970 and have since that time purchased three more for my family. I am especially impressed with the superb high quality material, workmanship, dependability and the performance of the Jennings compound bow."

Design: Max Greiner Jr., Photography: Bob Vespa
